

## **Sprint #6 Progress Update:**

### **Completed Task:**

During Sprint 6, our team successfully completed the following tasks:

1. We implemented a feature to send verification codes to email for account recovery, enhancing user security.
2. The UI was refined by adding media queries to the login and signup pages.
3. The position of the show/hide password icon was fixed for better usability.
4. We enhance the display of form validators' messages to ensure a smoother user experience.
5. The UI of the job post form was enhanced, making it more visually appealing and user-friendly.
6. The job modal for viewing job details was improved to provide a better user experience.
7. We created a new UI for viewing applicant profiles, giving clients a more appealing view.
8. The job posts UI was further refined for improved functionality.
9. We resolved a bug affecting the job types filter feature, ensuring accurate job search results.

### **Sprint Retrospective:**

#### **What Went Well:**

Our team made significant strides in improving the user experience of our platform. The successful implementation of the email verification feature for account recovery greatly enhanced user security. Aside from this, the refinements made to the UI, including media queries, form validators, and the job post form, resulted in a more visually appealing and user-friendly interface. The bug fixes for the job types filter also ensured accurate job search results, improving overall functionality.

#### **What Could Be Improved:**

Despite our achievements, there are areas for improvement. The testing phase revealed a few overlooked minor bugs that could have been identified earlier with more thorough initial testing., most especially in the user experience. We are working with our full efforts to achieve a better output.

#### **What Needs to Be Done:**

Looking forward, we need to focus on further refining our ui, accomplishing the few backend functionalities that are left, and our systems' processes to catch any potential issues before deployment.

#### **Summary:**

Our team has made good progress, with 85% of the project complete. We've improved the user experience by adding email verification for account recovery, making the interface more user-friendly, and fixing bugs in the job types filter. However, our initial testing missed some minor bugs that should have been caught earlier. Going forward, we need to keep refining the UI, finish the remaining backend tasks, and improve our processes to catch issues before deployment.
