   - Assignees: Krystel Castillo
2. Display all applicants on the template/UI
   - John Patrick Perez
3. Implement the withdraw application feature
   - Jonnel Tocmo, Jhon Lay Lopez
4. Hire applicants via email/outlook feature
   - Pearl Calderon

Sprint Retrospective – Sprint #4

What Went Well:

We successfully completed all planned tasks for Sprint 4, including displaying job posts on the feed, editing job post details, deleting specific job posts, implementing a job search feature, and adding a filter jobs feature. The team showed excellent collaboration and communication, which helped in quickly resolving any issues and staying on track with the sprint goals.

What Could Be Improved:

While all tasks were completed, some were finished very close to the deadline. We need to improve our time management to ensure tasks are completed with some buffer time.

What Needs to Be Done

Tasks that needs to be done are all tasks that included in our next sprint. We also need to implement a more robust and detailed testing for the features we created for the last sprints.

Summary:

Our project is progressing well, with significant milestones achieved in recent sprints. Key features such as displaying job posts on the feed, editing job post details, deleting specific job posts, and implementing robust search and filter functions have been successfully implemented. These

accomplishments have laid a strong foundation for the core functionalities of our project., we mark this progress approximately 65% completion of overall project.
